Education

Mechanical Engineering (Bachelor's)

SIRT College, India, 2015-2019

- Relevant courses: Object Oriented Programming.
- Made Smart Helmet as a project that integrates normal helmets with bikes through electronic systems making helmets necessary for operating bikes and GPS surveillance for accident scenarios.

Work Experience (4 year)

FPS Lounge, Remote (USA)

Fullstack Engineer, Mar-2024 - ongoing

- This is a product based company with a business model of improving online gaming skills via coaching for Esports.
- My role is to take care of the existing site, add new features, remove bugs and enhance performance of the overall site.
- I played a crucial role in migrating the whole code base from react to next.js framework.
- I have been assigned the task to recreate the site using new designs for better UI experience and beta features with new tools such as Redux and Tailwind CSS.
- The backend is written on Firebase so I have also worked with its cloud functions.

Protonshub, (India)

Software Engineer, Aug-2020 - Jan-2024

- Curated dashboard app for a PBM (Pharmacy benefit manager), a fortune 500 enterprise in React.js, for monitoring price variation of drugs with the help of charts and graphs.
- Developed and maintained a talent management App for students and clubs using Next.js and Redux toolkit named natty-hatty.
- Developed and maintained Native mobile Apps.
- Handled clients and solved queries related to developed Apps.
- Created engaging UI's for web platforms.
- Worked along with vivid teams distributed globally.
- Crafted Apps connected to CMS and AWS S3 bucket.
- Created marketplace for groceries and other general products by the name Gully Mart.
- Created marketing site for Gully Mart using Next.js.
- Crafted in-house web app for food delivery services prototype.
- Developed and handled maintenance of sports talent management app in React Native.

Raincode, Remote (India)
